COLLOIDS AND SURFACES A

Subject Index

Acid/base interactions, 85
Adhesive forces, 223
Adhesives, 85
ADSA, 509, 579
Adsorbed and wetting films, 137
Adsorption, 33, 95
Adsorption dynamics, 455
Adsorption films, 449
Adsorption kinetics, 307, 389
Adsorption relaxation time, 389
Air/water interface, 111
Air-water interface, 79
Albumin, 3
Allyl alcohol, 201
Alumina, 95
Augmented Young equation, 137
Augmented Young–Laplace equation, 137
Axisymmetric drop shape analysis, 157

Bare and film-covered surfaces, 137
Block copolymer, 65
Bond retention, 85
Bond strength, 85
Brewster angle microscopy (BAM), 281
Bubble surfactants, 49

Capillary rise, 519
Capillary waves, 307
Captive air bubbles, 19
Cationic polymers, 357
Cellulose ether, 157
Chlorosilane derivatives, 281
Cloud point, 489
Clouds, 449
Colloidal structures, 145
Complete wetting, 373
Contact angle, 163, 177, 191, 315, 381, 519
Contact angle hysteresis, 177, 271
Contact angle measurement, 177
Contact line, 71
Corresponding states surface, 413
Critical width of a hydrophobic spot, 243

Didodecyldimethylammonium bromide, 145
Diffusion-controlled adsorption, 567
Disjoining pressure, 423
2-Docosylamino-5-nitropyridine, 79
Droplet and bubble shapes, 525
Droplet condensation, 323
Drop shape analysis, 163
Dynamic contact angles, 271
Dynamic surface elasticity, 307
Dynamic surface tension, 111, 157, 389

Electrochemical microscratching, 349
Electro–chemo–mechanical treatment, 349
Emulsions, 423
Entropic edge-detection and linking, 579
Equilibrium contact angle, 271
Excess energy surface, 413
Excess entropy, 413

Fibrinogen, 3
Flocculation, 291
Fluorinated surfactants, 33
Fluorohydrocarbon polymer, 3
Foam, 475
Foam collapse, 475
Foam film, 65
Foams, 423, 465

Gemini surfactants, 567
Gradient theory, 123
Grain boundary, 373
Gypsum, 373

Heterogeneous surfaces, 177
Heterogeneous wetting, 71
Human plasma proteins, 19
Hydration, 223
Hydrophilic surface, 243
Hydrophobic interaction, 489
Hydrophobic spot, 243

Influence of surfactant, 547
Interface, 249

PII: S0927-7757(99)00368-4

Interfacial dilatational properties, 49
Interfacial tension, 191, 423
Inversion thickness, 547
Ionic surfactants, 389
Irreversibility, 335

Jensen–Shannon divergence, 579

Kinetics of surfactant adsorption, 389

Lamellar liquid crystals, 145
Langmuir monolayers, 79
Line tension, 123, 315, 323, 423, 519
Liquid content, 465
Liquid–liquid–fluid systems, 123
Liquid metal embrittlement, 349
Longitudinal waves, 307

Magnitude of the ER effect, 257
Marine aerosol, 449
Membranes, 423
Meniscus shape, 71
Metastable equilibrium, 335
Micro- and macrocontact angles, 525
Microcontact angles, Thin-film forces, 137
Microemulsion, 145, 249
Microscopic contact angles, 323
Mixed micelles, 95
Mixed surfactants, 95
Mobility of interfaces, 547
Molecular dynamics, 489
Molecular orientation, 455
Monolayers, FT–IR spectra, 215
Monolayer structure by FT–IR, 215

n-Alkyl poly-oxyethylene glycol ethers, 455
Neutron reflection, 33
n-Hexanoic acids, 465
n-Hexanol, 465
Nonionic surfactants, 489
Non-ionic surfactants, 455
n-Pentanoic acid, 465
n-Pentanol, 465
Nucleation and growth of two-dimensional domains, 281

Oil–water interface, 509
Order-of-reduction analysis, 525
Oscillating-air-bubble tensiometer, 449
Oscillating bubble method, 49
Ostwald's step rule, 281

Paraffin wax, 271
Pendant bubble method, 567
Pendant drop, 579
Pendant drop penetration film balance, 509
Phase diagram, 145
Phase transition, 249
Phospholipid monolayers, 509
Physicochemical state, 19
Pimple thickness, 547
Plasma polymerization, 201
Polyelectrolyte, 157
Polyelectrolyte adsorption, 291
Polyethylene oxide, 307
Polymer brush, 65
Polymer films, 307
Polymeric surfactant, 65
Polymer restructuring, 85
Poly(N-isopropylacrylamide), 111
Protein adsorption, 3
Pyrene, 335

Rapid reduction of surface tension, 567
Reflection–absorption FT–IR spectroscopy, 215
Reflectometry, 357
Rheological parameters, 257
Rough surface, 381
Rupture, 243

Saponite, 257
Sessile drop, 163
Sessile liquid drops, 19
Set plaster, 223, 373
Silanized glass spheres, 501
Silylation, 201
Small-angle neutron scattering, 33
Small bubbles, 547
Solid surfaces, 525
Solid surface tension, 191
Sorption, 335
Spectroscopic ellipsometry, 3
Spreading and entering coefficients, 475
Spread monolayers, 281
Stability against sedimentation, 257
Stearic acid, 49
Surface characterization, 201
Surface dilation, 111
Surface isotherms, 455
Surface layer structure, 307
Surface modification, 201
Surface rheology, 49
Surface tension, 449
Surface tension component, 191
Surface tension component approach, 191
Surface tension, interpretation, 413
Surface tension, thermodynamics surfaces, 413
Surfactant, 95
Surfynol 104, 567

Tensiometry, 33
Ternary system, 579
Thermodynamics, 423
Thin-film forces, 525
Thin liquid films, 423
Three-dimensional instantaneous nucleation, 79
Three phase contact line, 315
Trouton's rule for surfaces, 413

Ultralow interfacial tension, 579

Velocity of approach, 547
Vinyl octadecanoate monolayers, 215
Vinyl stearate monolayers, 215

Water adsorption, 373
Water/air interface, 455
Water contact angles, 501
Water–dodecane system, 323
Wenzel equation, 381
Wettability, 163
Wetting, 177, 315
Wetting film, 243
Wetting triple lineurvature, 71
Wilhelmy film balance, 501
Wood resin emulsion droplets, 357

Young's modulus, 373

Zeolite, 335
Zeta potential, 291
